## Press Release

### **Azimut and Central Uranium identify uranium targets on the South Bienville Property, northern Quebec**

Longueuil, Quebec – **Azimut Exploration Inc.** (“Azimut”) and its partner **Central Uranium Corporation** (“Central Uranium”), have received positive results for their 2007 exploration program on the South Bienville uranium property in northern Quebec.

The 2007 work included:

- 5,395 line-km of helicopter-borne radiometric, magnetic and EM surveying by McPhar Geosurveys Ltd; and
- the collection of 1,111 lake-bottom sediment samples and 64 rock grab samples for which results are pending; this work was performed by IOS Services Géoscientifiques Inc.

The radiometric survey identified at least 9 priority anomalies with strike lengths of more than one kilometre each and a cumulative length of 25 km. A two-week reconnaissance prospecting program revealed several mineralized outcrops on two claim blocks with scintillation readings from 5,000 to 8,000 counts per second (Radiation Solution ® RS-120). Yellow minerals, likely the result of weathering of primary uranium-bearing minerals, were observed at 4 different locations. Mineralized rocks are pegmatite, pegmatitic granite and granite. Other areas where prospecting has yet to be performed correspond to strong or very strong helicopter-borne anomalies of multi-kilometric extent.

The property consists of 10 claim blocks totalling 1,929 claims and a surface area of 935 km<sup>2</sup>. Central Uranium has optioned the property from Azimut, as reported in the press release of May 1, 2007. Azimut is the project operator and will act as such for the first two years.

The results reported here, combined with the identification of 17 recently announced target areas on the **West Minto** property under option by Majescor Resources Inc. (press release of October 11, 2007), further confirm the uranium potential of Azimut’s properties in northern Quebec and validate Azimut’s initial regional targeting. In addition to the South Bienville and West Minto properties, Azimut holds five properties under option in this region: **Central Minto** (optioned to Central Uranium), **North Minto** and **South Minto** (optioned to Rukwa Uranium Ltd.), **Hudson Bay** (optioned to Silver Spruce Resources Inc.) and **West Bienville** (optioned to Channel Resources Ltd.) These seven properties comprise 8,130 claims covering 3,808 km<sup>2</sup>.

This press release was prepared by geologist Jean-Marc Lulin, the company’s Qualified Person as defined by NI 43-101. Azimut is a mineral exploration company using cutting-edge targeting methodologies to discover major ore deposits.
