Press Release

Azimut completes comprehensive work program at REX, Nunavik, Quebec

Longueuil, Quebec – **Azimut Exploration Inc.** (“Azimut”) has successfully completed a major work program on its wholly owned REX property located in Nunavik, Quebec. Azimut’s management believes the REX property has excellent exploration potential, most notably for Iron Oxide Copper Gold (IOCG-type) mineralization (see press release of March 4, 2010). Results are pending.

Work on the property comprised:

- **15,969 line-kilometres** of a high-resolution airborne magnetic and spectrometric geophysical survey with 200-m spaced lines over a distance of about 100 km. The contract was completed by Novatem Inc. based in Mont-Saint-Hilaire, Quebec.
- **2,006** lake-bottom sediment samples that will be used to further define the property-scale geochemical footprint and rank high quality targets. The contract was completed by Geo Data Solutions Inc. based in Laval, Quebec.
- **1,430** rock grab samples collected across the property during an intensive reconnaissance program performed by Azimut’s exploration team.

The REX property comprises 4,420 claims over a surface area of 1,886 km², with a 100-km strike length in a north-south direction. It is situated approximately 130 km east of Hudson Bay and the shoreline community of Puvirnituk, in a largely under-explored region. Azimut previously reported on several historical prospects (notably for gold, silver, copper and cobalt) identified within the property limits (see press release of December 4, 2009).

This press release was prepared by geologist Jean-Marc Lulin acting as Azimut’s Qualified Person under NI 43-101.

Azimut is a mineral exploration company using cutting-edge targeting methodologies with the objective of discovering major ore deposits. Azimut holds one of the largest mineral exploration portfolios in Quebec. The exploration budget for its properties will reach a minimum of \$6.5 million in 2010. Azimut has 25.1 million shares issued.
